	Is there no power?

# Troubleshooting

---

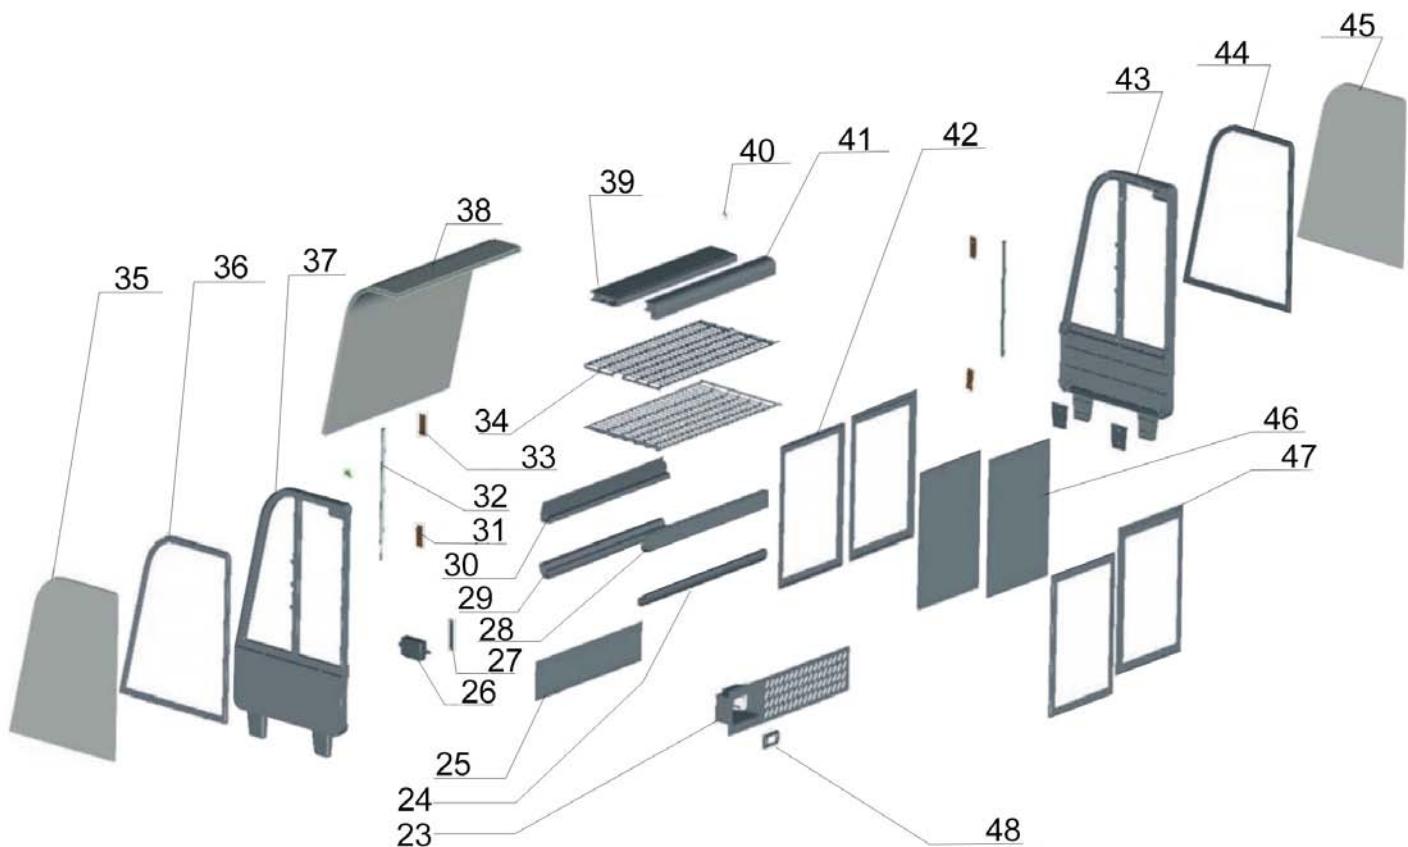

Unsatisfactory refrigeration	Is it under the sunlight? Is there any heat source nearby?
	Does the door close well? Has the door been open for a long time?
	Is the door seal strip deformed or damaged?
	Is food congested or too much?
	Does food block the air suction outlet?
	Regulate the temperature controller.
Too much noise	The refrigerator is not level.
	The refrigerator touches the wall or other objects.
	There is a loose part in the refrigerator.
Contact Omcan at 1-800-465-0234 for help if simple troubleshooting does not solve the problems.	

The following situations are not problems:

1. The murmur of water is heard when the refrigerator is working. This is normal as the coolant is circulating in the system.
2. During wet season, condensation may be found on the outside of the refrigerator. This is not a problem, this is caused by high humidity. Simply use a cloth to wipe it.
