Operation

1. Remove one pan, add water into the water box, the water box should only be filled halfway.
2. Turn the thermostat to zero.
3. Plug into the power supply, the indicator light will be red, adjust the temperature based on your needs, the green light will turn on and the heating process will begin. When the set temperature is reached, the thermostat will shut off the power and the green light will turn off. When the temperature gets too low, the thermostat will automatically start the heating process again until the set temperature is reached again. The cycle will repeat until desired.
4. When the temperature of pan has reached the desired setting, food may then be added immediately in the pan.
5. After working for an extended period of time, the water level will lower due to smoke volatilization.
6. Turn the thermostat to zero and remove from the power supply when completed operation.

Maintenance

The user must clean the machine after use, making sure to clean with mild detergent and a damp towel. Never clean this machine with running water or pressurized jets.

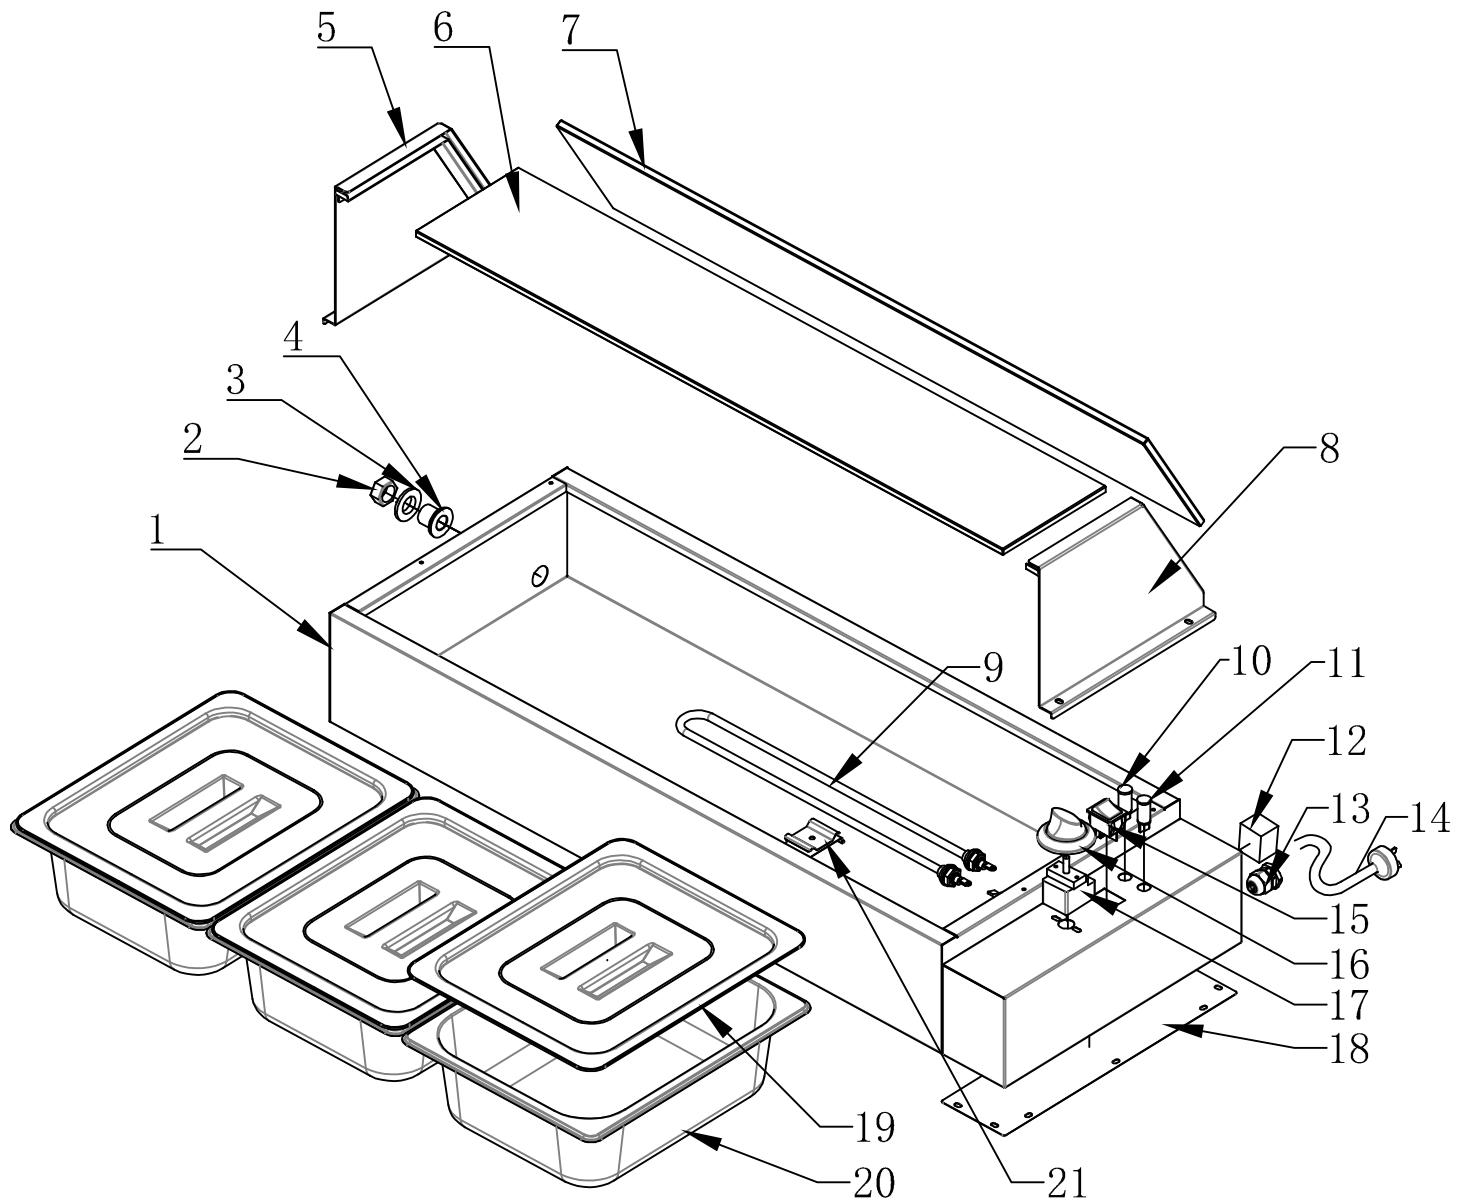

Maintenance

Note: maintenance and cleaning procedures must be done ONLY when the machine is not in operation and unplugged from the power supply.
