## Operation

- Before use, check whether the power supply corresponds to that required by the machine, check whether the external earthed wire is reliably connected.
- The machine which 3 phase motor must be checked whether the machine rotates in the direction indicated by the rotation mark. If the rotation direction is wrong, exchange the two of the three livewires each other.  
**Note: for test of machine, mixing tools should never be installed, otherwise they would fall out in order to avoid damage to machine parts because of wrong rotation direction.**
- Select speed and agitator:
  - Spiral agitator: it is suitable for mixing dough and sticky solid food, the weight of flour must refer to the mark, the capacity of water is 47%~50% of the flour's, and the machine is available for low speed.
  - Vaned disk agitator: it is suitable for thin pieces, powdered and mushy food, like stuffing, and available for middle speed.
  - Beater: it is suitable for cream and eggs beating, and available for high speed.**Caution: stop the machine to change speed, do not mix dough at middle or high speed.**
- Speed changing operation: the unit has an adapted motor and mechanism's concerted action to change speed.
- Bowl lift: the bowl is driven by motor to raise or descend up to the requested position (top point, bottom point, and stop point). The operating method is:
  - Adjust the lifting handle to 45° comparing the horizontal line, and then raise the bowl.
  - Adjust the lifting handle to the horizontal line, and then descend the bowl.
  - When the lifting handle is between the two positions, the bowl will stop lifting.**Note: when assembling an agitator, in order to avoid falling, the backing pin on the mixing shaft must slip into the L-shaped slot on the agitator.**
- The mixer is equipped with a timer, so you can select the timer control as needed. If you use the timer, you can set the needed time on the timer.

# Maintenance

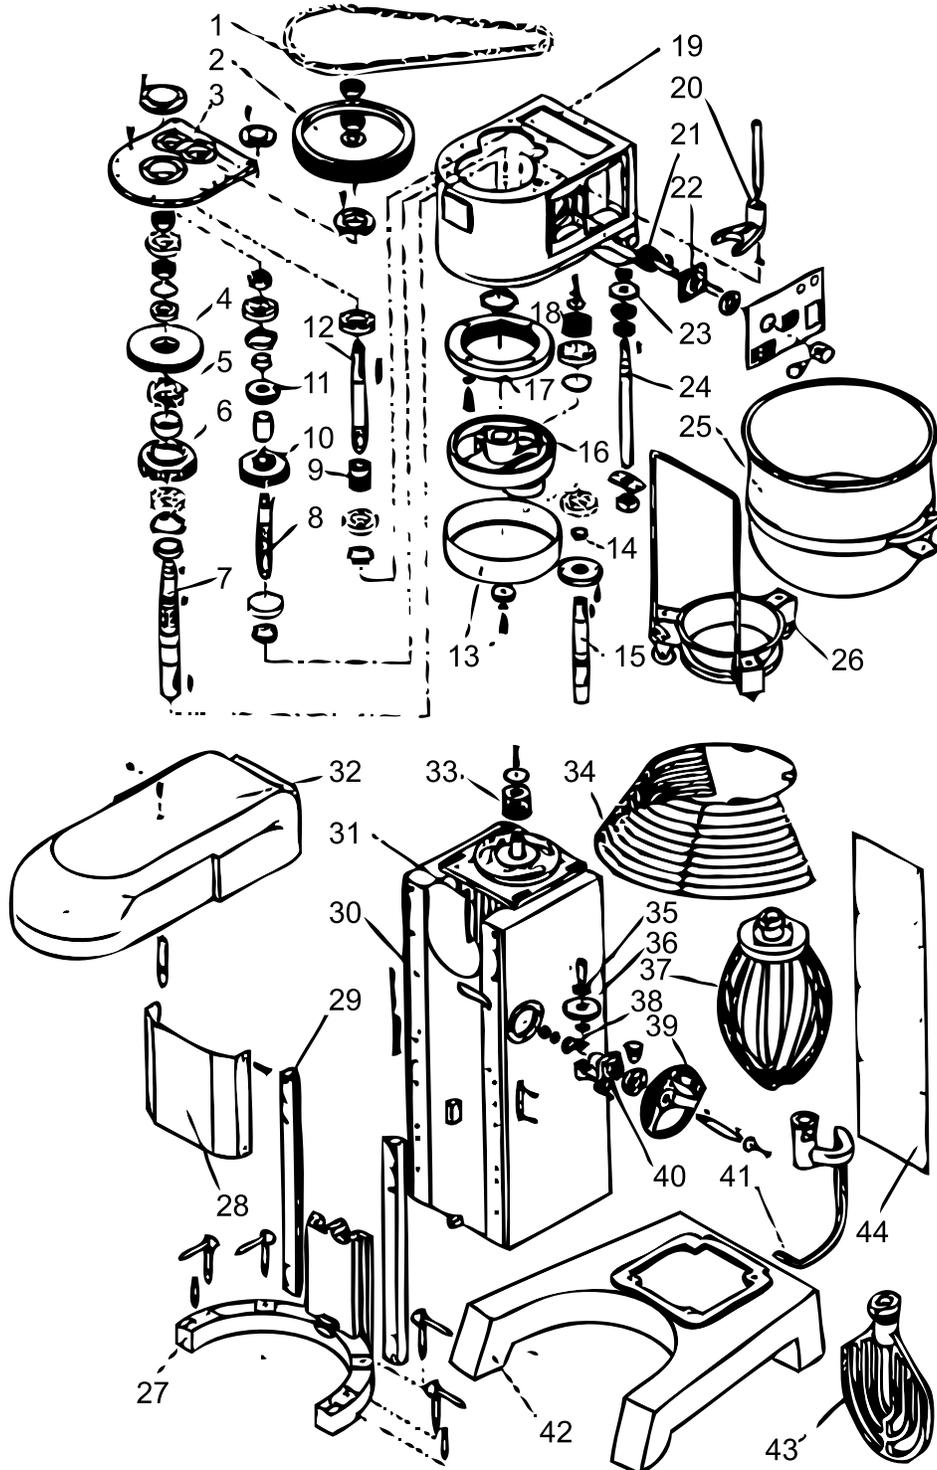

1. After use every time, clean the bowl and agitators etc., carefully, in order to ensure the machine clean and hygienic.
2. Lubricate the lifting slideways with a small amount of oil regularly.
3. The gearbox is lubricated with special grease that will be sufficient for six months. When added or replaced grease, it is necessary to remove the upper cover and the cover of the bearing seat.

# Troubleshooting

Trouble	Probable Cause	Remedy
The mixing shaft do not rotate after switching on.	Electric connectors are loose.	Check the electric circuit, tighten those loose connectors.
Oil leakage.	Oil seals are worn out.	Replace those oil seals.
The lifting handle is too heavy.	Guideways are corrosive.	Clean and oil the guideways.
	The lifting screw, bevel gear and handwheel shaft etc. is dry.	Oil them.
Temperature rise of motor is too high, the revolution is lower.	Lack of voltage.	Check the supply voltage.
	Over load.	Less load.
	The working speed selected is too high or agitator is not suitable.	Select a suitable speed and agitator as mentioned above.
