Installation and Operation

1. Remove unit from the box and remove all parts.
2. With the operator side facing you (idea to the left) set it down on a flat sturdy surface.
3. Open the top flaps of the unit and remove the parts and packing foam. Put the parts to the side.
4. Slide in glass windows for both the back and front of the unit.
5. Pour six quarts of water into the base of the unit to cover the heating element. DO NOT OVERFILL. It is recommended that you use hot water to reduce preheat time. Make sure valve drain cap is screwed tightly closed.
6. Once the water is in, place the perforated rectangular base on the left side of the unit.
7. Please square base plate with the control lever on the right side of the unit.
8. Slide the partition piece into the left slots to separate the hot dog and bun sections of the steamer.
9. Place the hot dog rack of the left side compartment. Make sure the rack is standing on its feet to allow proper circulation of steam.
10. Place the bun rack on the right side in the bun compartment.
11. Place lid beam in the middle of the unit so the lids rest on the edges of the beam.
12. Place lids down on unit edges and swing closed. Adjust lid beam to fit if needed.
13. Ensure that the unit is plugged into a grounded and properly-side electrical outlet to minimize shock or fire hazard. Refer to the electrical requirements on the serial tag located on the operator side of the unit.
14. Turn the switch on and set the thermostat control on the highest setting until steam is generated.
15. For normal operation, set the thermostat control in the center of the range between the highest and lowest temperature (130 degrees).

Installation and Operation

16. Place hot dogs in the small compartment and buns on the wire rack in the large compartment. Arrange the hot dogs and buns so that there is enough room for circulation of steam.
17. To control the amount of steam in the bun compartment, use the adjustable humidity control lever located in the bun compartment under the wire rack.
18. Keep lids closed when not serving.
19. Add hot water when necessary to maintain the water level. Do not allow the unit to burn dry. If you accidentally run it dry, turn off and allow the unit to completely cool before adding water. Adding water to a dry unit while it is still hot could cause damage to the elements.

Maintenance

CLEANING

NOTE: To maintain cleanliness and increase service life, the hot dog steamer should be cleaned daily. Do not immerse the unit in water or any other liquid. If liquid enters the electrical compartment it may cause a short circuit or electrical shock.

1. Disconnect the power cord from the electrical outlet.
2. Allow the unit to cool down completely.
3. Remove any remaining hot dogs and buns.
4. Drain the water using the drain pipe located on the operator side.
5. Detach all removable parts including the bun rack, perforated trays, steam control lever, partition and glass panels. Thoroughly clean the unit. Although stainless steel is corrosion resistant, for longevity purposes the unit should be cleaned after every use.

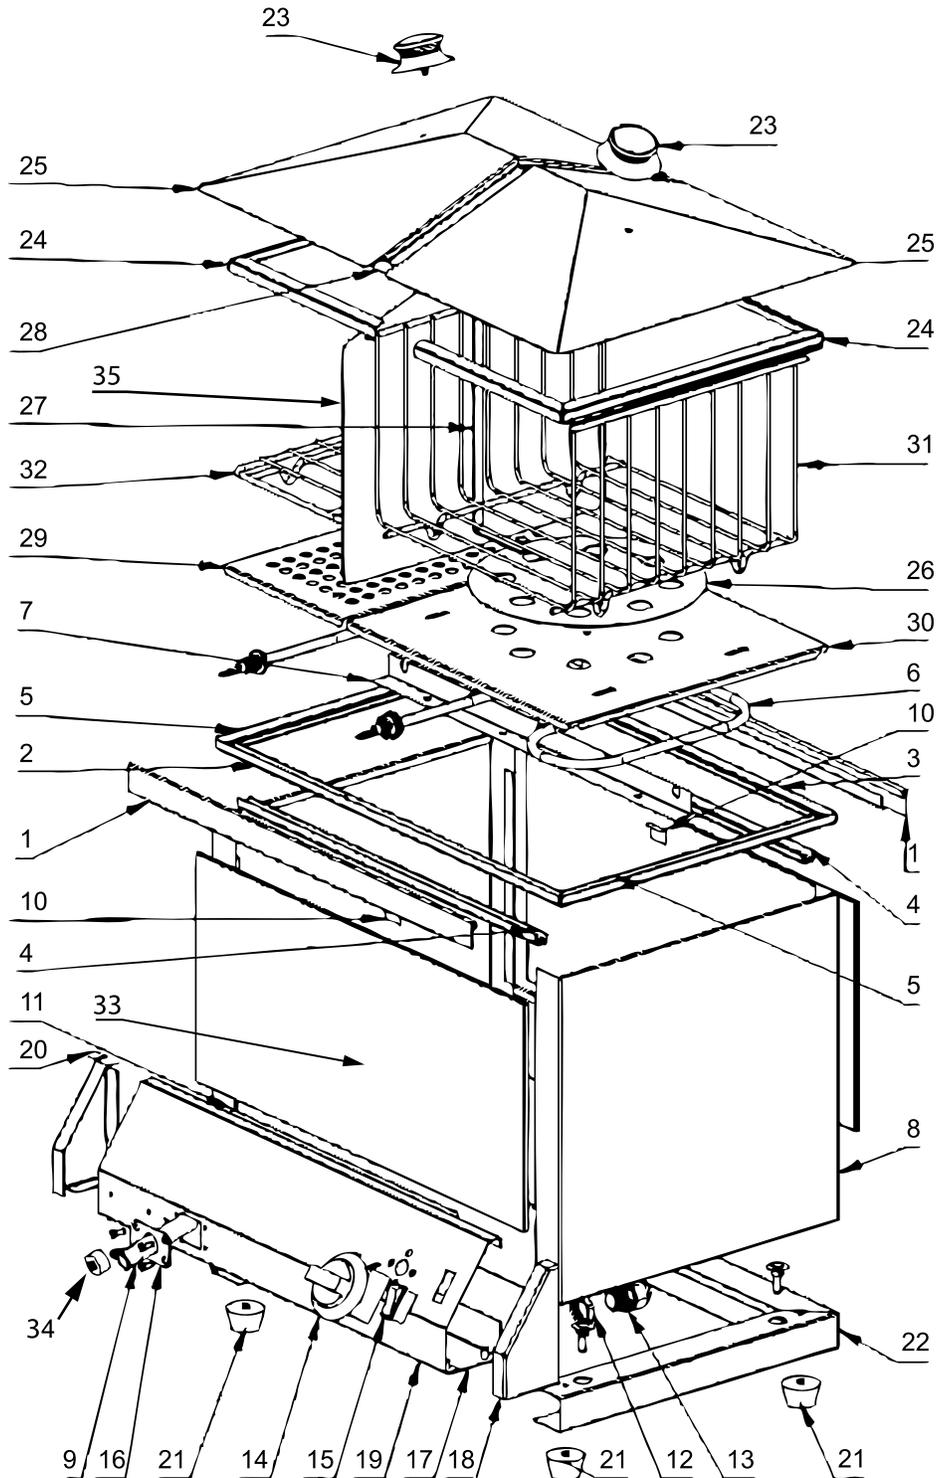

Troubleshooting

Trouble listed are for reference. If any fault occurs, please discontinue use. Do not attempt to repair yourself. This will void the warranty.

Problem	Cause	Solution
Condensation on glass partition.	Cool air striking the warm surface of the steamer.	Avoid placing the unit against cool drafts of air.
Hot dog casing burst.	Too much steam is being generated.	Reduce the thermostat control to lower setting.
Buns too soggy.		Adjust the steam control level.
Buns too dry.
